Hari Prakash K

Senior AI Engineer | Agentic AI, GenAI Platforms & Backend
Architecture
Tiruchendur, Tamil Nadu, India

Summary

Backend and AI engineer with 7+ years building production systems, the last two focused on agentic AI and RAG. Designed and shipped a multi-agent RAG platform serving ~1,000 users at ~100 requests/min, and an autonomous ticket-triage agent covering 87+ Jira boards. Comfortable across the full stack: FastAPI/Python and C# services, SQL Server performance tuning, and LangGraph/LangChain-based multi-agent orchestration deployed on Azure.

Experience

Odessa

7 years 5 months

Staff Engineer

April 2024 - Present (2 years 6 months)

Bengaluru

Architected a production multi-agent RAG platform (LangGraph, LangChain) with Planner, Researcher, and Executor agents, serving roughly 1,000 users at ~100 requests/min, combining BM25 lexical search with vector retrieval (ChromaDB/Milvus) for dynamic document routing over unstructured knowledge bases.

- Built an autonomous ticket-triage and RCA agent integrated with 87+ Jira boards, using per-client custom knowledge bases to handle ticket volumes ranging from 1 to 30 per week per project, with SLA-driven updates and remediation recommendations.
- Integrated local (Ollama) and cloud-hosted LLMs (OpenAI, Llama 3) behind containerized services, cutting token/cloud compute cost by 35% while keeping enterprise data on-prem where required.
- Applied system design patterns (microservices, load balancing, connection pooling) and used Langfuse/LangSmith tracing to diagnose and fix production issues across agentic workflows.

Senior Software Engineer

April 2021 - April 2024 (3 years 1 month)

Bengaluru

Built asynchronous backend services and REST APIs (FastAPI, Python, SQLAlchemy connection pooling), reducing API response latency by 30% across high-volume data workloads.

- Led T-SQL performance tuning across core database modules — optimizing indexed views and execution plans to speed up stored procedure execution by 40%.
- Built distributed data pipelines (NumPy, Pandas) to streamline structured data transformations for enterprise financial operations.

Software Engineer

May 2019 - April 2021 (2 years)

Greater Bengaluru Area

Designed a Job Automation Module (C#, SQL Server) automating asset/invoice creation from raw data, cutting manual operational effort by 55%.

- Built secure SOAP web service integrations with the CyberSource Payment Gateway for high-concurrency automated transactional billing.

Education

Annamalai University, Annamalainagar

Master of Business Administration - MBA, Finance and Financial Management Services · (June 2019 - May 2021)

St. Joseph's College Of Engineering

Bachelor of Engineering, Mechanical Engineering · (June 2015 - May 2019)
